

B) Motorized Switch Over ATS

B) Motorized Switch Over ATS

This type of ATS uses a specially designed motorized assembly to switch between two power sources. The switching device is housed within a suitable enclosure and includes the following features:

1. Enclosed Switching Device: The switching device is securely installed inside a suitable enclosure, with an IP rating based on customer requirements, and bus bars are provided for power cable connections.
2. Built-In Programmable Timers: The switching device includes built-in programmable timers.
3. LED Indication Lamps: LED lamps indicate the ATS status and position.
4. Optional Outgoing Breakers: The ATS can be provided with or without outgoing breakers, depending on the client's request and budget.
5. Custom-Made ATS Units: Custom units can be designed to include multiple outlets, effectively combining the ATS with a distribution board.
