

BioSafe Engineered Water Cleaner & Sanitizer

Converts municipal water into a powerful contaminant-removing, bacteria-killing agent.

Simple, effective, and cost effective, the BioSafe Cleaning Solution is produced on demand and on site using only cold water. The BioSafe Solution converts municipal water into a powerful contaminant-removing, bacteria-killing agent that cleans and sanitizes without the use of chemicals. The engineered water destroys all microorganisms and is a powerful bio-film, fiber, and surface control agent used to disinfect and clean virtually any environment.

The BioSafe Cleaning Solution is more effective than all traditional chemical alternatives and is environmentally and employee friendly. The BioSafe Solution can eliminate the health and safety issues associated with harsh chemicals as the method cleans and sanitizes absent of any chemical effluent and residue.

Applications

For use as a cleaner/disinfectant and doubles as a great-tasting drinking water in a wide variety of environments and applications.

- Restaurants
- Fitness Centers
- Government/Military Institutions
- Commercial Cleaning
- Healthcare/Medical Facilities
- Hotels/Motels
- Packaged Food Industries
- Senior Assisted Living
- Educational/Athletic Facilities

Benefits to the User

- No Chemicals to Use or Buy
- 80% Savings in Chemical Costs
- Unique Industry Technology
- Safe, Economical, User-friendly
- FDA and USDA Approved
- EPA Registered
- Meets and Exceeds WHO Standards
- U.S. Patented Processes & Technology

System Features

- On-site, On-demand Oxygenated Water
- Produces Oxidation Reduction Potential (ORP) of 875-925 mV OR 1.0-1.5 ppm-mg/L
- Delivers a 99.999% Reduction in Harmful Microorganisms
- Generates a Contaminant-Free Drinking Water
- Compact Modular Unit weighs 9 lbs.
- Volumetric Rate Flow of 1.0 Gallons Per Minute (GPM)
- Turnkey and Ready to Operate
- Dimensions 14" x 12" x 6"
