Characteristics and typical fields of application

Rutile coated electrode of E 25 20 R / E310-16 type for welding heat resistant rolled steels e.g. in annealing plants, hardening plants, steam boiler construction, the crude oil industry and the ceramic industry. Heat resistant CrSiAl-steels exposed to sulfurous gases should be weld with a final layer of BÖHLER FOX FA after joining. For thick-walled components, the basic coated BÖHLER FOX FFB is recommended. Avoid the service temperature range between 650°C and 900°C due to the risk of embrittlement. Scaling resistant up to 1200°C.
